
Gira G1 Release Notes

Firmware version: 3.3.88

Gira Project Assistant (GPA) version: 4.5 or higher

We recommend that you always use the latest available GPA version.

New functions

- The Gira G1 can be located in the GPA as Client in the building structure.
The IP configuration data, settings for floor call and settings for the temperature sensor can be defined in the properties.
- The Gira G1 makes various Gira data points available which can, for example, communicate with the Gira X1 or Gira L1.
These are the following individual functions:
 - Display of the measured room temperature and the outside temperature on the status bar of the Gira G1
 - Evaluation of the proximity sensor
 - Evaluation of the display touch
 - Evaluation of the measured brightness value
 - Controlling the LEDs of the Gira G1
 - Switching Gira G1 to inactive e.g. during the day in public areas
 - Display of message pages as overlay with max. 20 messages
 - Floor call for door communication in SIP Client mode
 - Ringer tone deactivation for door communication in SIP Client mode
 - Evaluation of door communication statuses for Smart Home functions, such as switching on the light when a call is set up
- The SIP functionality now also supports 2N IP Verso door stations

Known Home Server Client restrictions

- No timer configuration
- Direct plug-in switchover (plug-ins are only available via menu tiles)
- Diagram plug-in: Switching over the hour/day/week/month/year
- Camera plug-in: Display of buttons
- Calling up third-party apps (e.g. Revox)
- "Shake" and "Click sound" menu items have no function
