
Gira G1 Release Notes

Firmware version: 3.4.98

Gira Project Assistant (GPA) version: 4.7 or higher

We recommend that you always use the latest available GPA version.

Note

After the firmware update, new versions of the apps available on the Gira G1 are installed. If the Gira G1 is operated as an eNet or HomeServer client, please check in the "Settings - Gira app settings" menu on the Gira G1 whether the new versions of the apps have been activated.

Restart the Gira G1 after waiting 2 minutes.

Fixed bugs

- Troubleshooting in the Gira G1 door communication app:
Tapping the Back button on the home screen will move the door communication app to the background, which means the app does not need to be restarted.

Known Home Server Client restrictions

- Direct plug-in switchover (plug-ins are only available via menu tiles)
- Diagram plug-in: Switching over the hour/day/week/month/year
- Camera plug-in: Display of buttons
- Calling up third-party apps (e.g. Revox)
- "Shake" and "Click sound" menu items have no function
- Evaluation of the Gira G1 temperature sensor module not possible
